Welsh Red Meat Sector

Where to now?

How can we increase profit, productivity, waste less produce and inputs, save time, increase sustainability. Have happier animals and farmers and identify and deliver opportunities.

It's all about doing something with data

Embrace Technology

As a friend As a worker Not just a tool

Artificial Intelligence (AI)

This is where a machine does something smart in light of data inputs. Some code takes data on does some computation and gives you some actionable that is regarded as intelligent. Why Now?

Rural Payment Wales (RPW) is now digital

HMRC is becoming digital

Vat from April 2019 (other taxes soon to follow)

EID Sheep and Cattle soon to be paperless

Supply Chain Information

Consumers will be demanding transparent information on everything they buy.

Consumers will also want a full provenance on the product the buy.

They will want the to also to taste consistently good.

And at a reasonable price.

No problem therefore???

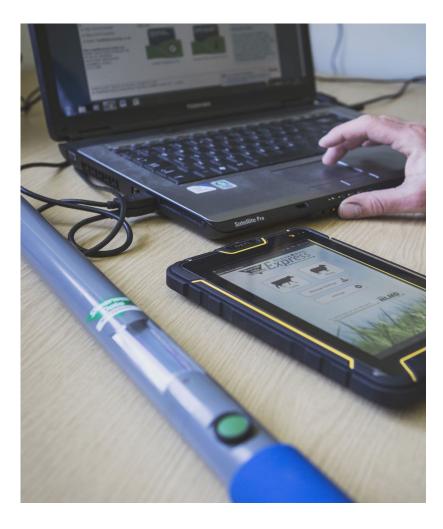

What are we doing about it???

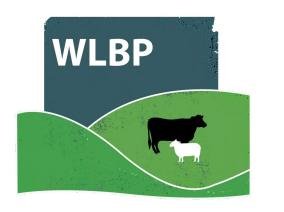

WLBP Farm Records

Cofnodion Fferm WLBP

Farmer controlled agricultural cooperative

7,500 members

5000 Farms inspected annually

ANTIMICROBIAL RESISTANCE (AMR)

SUPERBUGS' SOON TO KILL MILLIONS OF US EACH YEAR?

"Drug resistant infections will kill an extra 10 million people a year worldwide...

by 2050 unless action is taken, a study says. They are currently implicated in **700,000 deaths each year**..." BBC 2014

"Approximately 80% of the antibiotics sold in the United States are used in meat & poultry...

The vast majority is used on healthy animals to promote growth, or prevent disease in crowded or unsanitary conditions..." Consumers Union (USA)

"The potential threat to human health... is significant, as pathogenic-resistant organisms propagated in these livestock are poised to enter the food supply & could be widely disseminated in food products..." Public Health Reports 2012, official journal of the U.S. Public Health Service

Links to these reports & more @ tinyurl.com/superbugs101 A page on this site of articles - from science journals & news reports - on simple easy ways that each of us can reduce suffering, pollution, climate change & wastage of resources... by improving our health prospects:
